DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 and 25-36, drawn to a recombinant bacterium expressing a cytokine and tumor antigen and method for use in cancer therapy, classified in class 424, subclass 93.2.
- II. Claims 20-24, drawn to an *E. coli*-BCG shuttle plasmid, classified in class 534, subclass 320.1.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in MPEP 86.05 for inventive groups that are directed to different related products, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions because the bacteria of Group I do require the use of a plasmid, much less the *E. coli*-BCG shuttle plasmid of Group II. Not a single claim in Group I recites a plasmid, or the claimed plasmid.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, and *vice versa*, restriction for examination purposes as indicated is proper.

Art Unit: 1632

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
